

WHAT HAPPENS IN TERRITORIES? EXPLORE HOW YOUR LOCAL ADMINISTRATION IS PERFORMING

CARLO AMATI – SIMONA DE LUCA

**Italian Ministry of Economic Development
Department for Development and Economic Cohesion (DPS)
Public investments evaluation and verification unit**

Overview

Well-being of citizens is also influenced by the performance of public administrations in providing essential services and by the availability of infrastructures.

Availability of essential services and infrastructures has a direct impact on the living conditions of citizens of different areas of a country: regional policy is the instrument aimed at reducing the economic gap of the less-developed territories, which can help more in general to increase the standard of living conditions.

The Italian regional policy for 2007-2013 also envisages:

- a performance-based mechanism that rewards the achievement of **quantitative targets** (policy outcomes);
- **innovative tools** to explore how local administrations are performing and to measure their efficiency;
- intensive use of **web-based applications** whereby the user can produce contents, give direct feedback, be a member of a network.

Target outcomes for Southern regions

- **3 Billion euros**
- **8 Regions involved**
- **4 Themes**
 - Education
 - Child and elderly care
 - Water service
 - Urban waste
- **11 Indicators**

Targets set at minimum standard

Targets equal for all Regions

Sub-regional performance assessment

The governance role of DPS

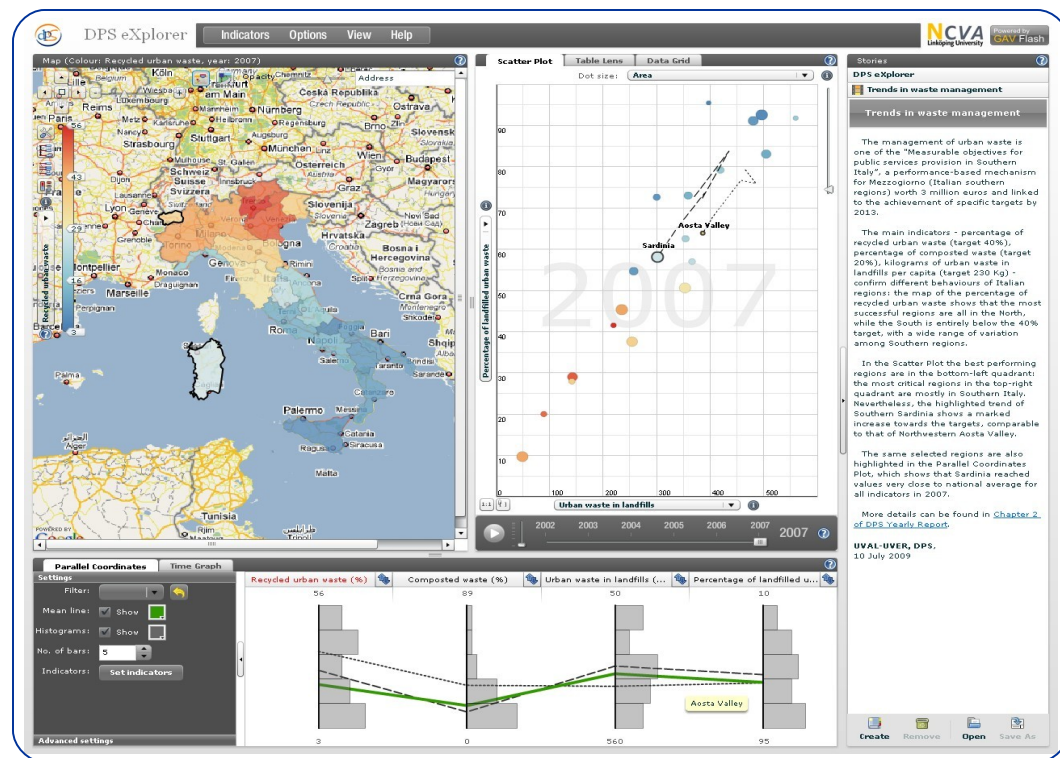

An interactive tool to explore data

DPS eXplorer

Makes it possible to analyze and compare the performance of local administrations on the themes linked to the incentive mechanism

Among its main features:

- interactive exploration of multiple indicators
- time animation
- stories: users can contribute with their own narratives and analyses
- integration with user data

An interactive operational tool

Interactive Visualisation of
Project Length Estimates

Can be used for:

- benchmarking
- early-warning
- assessment

VISTO is:

- a **simple** interface of **complex** data based on **predictive** models
- transparent to institutions and citizens
- a universal tool for “clinical diagnosis”
